DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 17-34 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The applicant has liberally used the term "electronic substrate" which is not properly described in the specification. Furthermore the applicant has described an intended article to be treated, but has not claimed it; this raises doubt as to the intention of the invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 17, 21, and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by **Chanasky et al (5,345,061)**. **Chanasky et al** discloses a system for heating circuit boards and includes a support (conveyor 12) for supporting the circuit board in a

working position, a heater (plate 51) for heating the underside of the circuit board, and multiple elongated hollow tubes (58, 90, 94, 100, 104, 108) arranged parallel to each other having openings for directing an air supply past the heater toward the printed circuit board by way of air supply (valves 60, 62).
